DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-2, 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Taguchi et al. (US 5,895,527).

Taguchi et al. discloses in Fig. 2 (see col. 5 lines 5-25) a bowl shaped graphite rotation mold 40 (l.e. commonly known in the art as a susceptor) surrounding an inner quartz crucible 45 with defined porosity distributions. Ventilation holes 41 are cut into the susceptor as shown including some that are spaced vertically.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 09/976,796

Art Unit: 1765

4. Claims 3,4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taguchi et al. as applied to claims 1,2,5 above, and further in view of Fukada et al. (JP 406157186 A).

Taguchi et al. is described above.

Taguchi et al. does not disclose a protective coating on the graphite susceptor.

Fukada et al. discloses an coating layer applied to graphite susceptors used in the Cz method. The layer is described as preventing crazing (i.e. surface material loss) thus improving the process. One of the oxidation resistant materials suggested as the coating is SiC in col. 3 lines 27-31.

It would have been obvious to one of ordinary skill in the art at the time of the present invention to combine Taguchi e al. with the Fukada et al. because the SiC coating of Fukada et al. was described as preventing crazing of the susceptor and thus reducing costs for the process and carbon contamination of the Si melt.

It would have been obvious to one of ordinary skill in the art at the time of the present invention to coat the graphite susceptor with SiC because Fukada et al suggests such a coating will prevent graphite crazing.

Application/Control Number: 09/976,796

Art Unit: 1765

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew A. Anderson whose telephone number is (703) 308-0086. The examiner can normally be reached on M-Th, 6:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Benjamin Utech can be reached on (703) 308-3836. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9310 for regular communications and (703) 872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
